

CHARGE CONNECT RANGE

Some customers already have secure rooms or strong boxes but need a solution that will enable them to sync and charge numerous devices in one location with ease, secure in the knowledge that the process is being controlled through specialist equipment that is fit for purpose. The universal USB sync and charge will accommodate up to 16 devices delivering the full rate of charging up to 2.1A per port, including iPads, tablet PC's, e-readers, mobile phones, digital cameras, MP3 players, 3-D glasses, GPS devices and any other USB chargeable item. With optional energy saving and management technology to provide you with peace of mind and improved product longevity.

CHARGE >

Using professional grade USB components which are able to continuously output specific volumes ensures just the right amount of power is supplied to each unit. When a device is plugged into any one of the 16 ports, the internal processor detects and profiles the device and ascertains the correct amount of charge to deliver to that specific device. This means that you are able to mix and match devices from different manufacturers and charge them all at the same time.

SYNC >

Syncing the devices is easy, just connect the host computer to the ChargeConnect 16 using the USB 'A to B' cable provided. The host computer is then able to 'see' all the devices connected to the charge unit and the user is able to manage each device.

Future proof - USB connection allows the charging profiles to be updated as new tablets or operating systems are released.

The perfect charge - with this option each device's charging profile is perfectly delivered, ensuring optimum charging across the board via USB

Analysis - Using the free software supplied, each connected USB device is able to be viewed and analysed. This data can inform the user which devices are connected, their rate of charge, whether they are syncing and ultimately, the health of the device. Essential knowledge when managing multiple devices for critical services.

Multi device management - when connected to the host computer sync and manage 8 or 16 devices simultaneously. Set-up is quick and easy, via USB cable to host computer.

LED display - optional charge status indicator for Sync Mode Standby (red), Charge Mode (slow pulse red) and Charge Cycle Complete (fast pulse blue).

Smart design - features high-vent grills for maximum heat dispersion and the small footprint is ideal for desktop installation

Loxit warranty - engineered to last and thoroughly tested. We offer a full 12 month return to base warranty.

** Please note, Apple computers operating iTunes will sync up to 30 iPads or other Apple products simultaneously. For PC's operating current Windows software, iTunes will sync up to 7 Apple products simultaneously.*

CHARGE CONNECT CONFIGURATIONS

1 - Store for a durable and safe storage solution. **2 - Charge** uses the original chargers and transformers supplied with the device for a simple and cost effective solution. **3 - Sync & Charge** with cutting edge technology to profile each device, ensuring optimum and safe charging no matter which device is being used. Free updates ensure future compatibility.
