

Hi-Lo FIXED HEIGHT SCREEN MOUNTS

With nearly 20 years experience in the delivery of professional audio-visual solutions, we recognise that whilst electronically height adjustable screens are very flexible, there are times when fixed height solutions are appropriate.

So we created the Loxit range of fixed height screen mount solutions, where the screen can be manually configured to a height to best suit your needs.

Screen positioning is achieved via a secure bolt system and can be adjusted to achieve the desired height at regular increments. This sturdy range is designed for large format displays and meet the rigorous demands of many environments including education, corporate, health, exhibitions and conferences, where the presentation and showcasing of audio-visual solutions is key.

Like all our products they use universal brackets for a large variety of screens with additional safety screw down screen clamps to prevent the screens dis-mounting when in transport.

Products which are designed to last and ready for change.
